DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shi et al. U.S. Pub. 2005/0014063 in view of Yamada et al. U.S. Pub. 2002/0076619 and further in view of Kim et al. U.S. Pat. ,846,594.

With respect to claim 1, Shi teaches a lithium ion secondary battery comprising: a positive electrode; negative electrode; a separator interposed between said positive electrode and negative electrode; and an electrolyte. See paragraph 10. The electrolyte comprises a solvent and a salt. See paragraph 15. The separator contains binder materials such as polyvinylpyrrolidone (¶ 17) and polysulfone (¶ 18). With respect to claim 2, the separator also contains alumina (¶ 14).

Shi is silent to: a lithium salt and polyvinylpyyolidone binder (claim 1); the weight ratio between the basic solid particles and binder of 96:4 to 99.5:0.5 (claim 3); positive electrode comprising lithium oxide (claim 4); a carbonaceous anode (claim 5); and primary/secondary binder ratio of 1:10 to 10:1 (claim 6).

Application/Control Number: 10/773,157

Art Unit: 1746

However, Yamada teaches the equivalence of polysulfone and polyether sulfone as separator materials in lithium batteries (¶ 73).

Kim teaches that it is conventional to employ carbonaceous anodes, lithium oxide cathodes and lithium salt containing electrolytes in lithium ion batters. (col. 1, lines 10-35).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the instant invention was made to employ the polyether sulfone of Yamada in the separator of Shi, because Yamada shows that polyether sulfone and polysulfone are equivalent materials known in the art. Therefore, because these two materials were art recognized equivalents, it IS obvious to substitute polyether sulfone for polysulfone.

With respect to the carbonaceous anode, lithium oxide cathode and lithium salt electrolytes, it would have been obvious to one of ordinary skill in the art at the time the invention was made to these conventionAL lithium ion battery materials, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use. In re Leshin, 125 USPQ 416.

As to the weight ratios of claims 3 & 6, it would have been obvious to one having ordinary skill in the art at the time the invention was made to employ the instant ratios, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980). The skilled artisan recognizes that

Art Unit: 1746

the amount of polyether sulfone directly effects the wettability and mechanical

strength of the separator.

Conclusion

Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Monique Wills whose telephone number is (571) 272-1309. The Examiner can normally be reached on Monday-Friday from 8:30am to 5:00 pm.

If attempts to reach Examiner by telephone are unsuccessful, the Examiner's supervisor, Michael Barr, may be reached at 571-272-1414. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Application/Control Number: 10/773,157

Art Unit: 1746

Status information for unpublished applications is available through
Private PAIR only. For more information about the PAIR system, see
